TITLE : POROUS SHEET FOR SLIDING AND ADHESIVE SHEET FOR SLIDING

ABSTRACT : PURPOSE: To improve heat resistance and resistance to wear by dispersedly containing a specified amount of polyimide powder in a polytetrafluoroethylene resin, and specifying porosity of the resine.

CONSTITUTION: Polyimide powder is dispersedly contained in a polytetra- fluoroethylene resin at the amount of 1 to 50wt. percent, and porosity of the resine is determined to be 5 to 55 percent. The polyimide powder acts as a filler material in PTFE, and is typically obtained by converting polyamide acid obtained by the reaction of aromatic tetracarboxylic acid dianhydride on aromatic diamine into imide. When the new material is used as a sheet, damage to mating materials is reduced, and heat resistance and resistance to wear are also improved.
